Outline of Unit Learning Outcomes (ULO) HMF701 & HMF702

HMF701: Agricultural Health and Medicine

Unit Learning Outcome (ULO):	At the completion of this unit students can:
ULO1	Describe and identify the clinical factors contributing to poor physical and behavioural health outcomes in the agricultural workforce, nationally and internationally.
ULO2	Appraise the social, economical, and health service constraints experienced in farming communities.
ULO3	Identify and explain the occupational health and safety risks associated with farming and rural communities.
ULO4	Apply knowledge of rural health, safety and wellbeing and develop a response to a community issue.
ULO5	Critically evaluate the agricultural health and medicine literature.
ULO6	Use online communication technologies to investigate and address agricultural and rural health problems through effective teamwork.

HMF702: Health and Sustainable Agricultural Communities

ULO:	At the completion of this unit students can:
ULO	recognise and describe the social determinants of health that contribute to poor physical and behavioural outcomes in the agricultural workforce nationally and globally
ULO2	explain the environmental, economical and health service constraints experienced in farming communities and how these influence physical and mental health
ULO3	discuss the role climate variability plays in the health and well-being of rural and remote communities
ULO4	examine the underlying attributes of successful health policies, health promotion and community level interventions in agricultural settings
ULO5	critically evaluate literature surrounding the role of lifestyle disease on rural morbidity and mortality
ULO6	employ online communication technologies to investigate and address agricultural and rural health population problems
